Introduction

Previously, TaifaCare EMR focused solely on care and treatment modules that facilitated patient care and integrated with pharmacy and stock systems for inventory management and prescription dispensing. The released 3.x platform has expanded its capabilities by introducing a comprehensive Stock Management module.

This user guide is designed to provide all TaifaCare users with detailed step-by-step instructions for interacting with the stock management module. It covers importing stock items, managing stock operations, generating stock reports, and understanding user roles and scopes, among other features.

Intended Audience

All stakeholders, most especially implementers of TaifaCare EMR

Requirements

Working instance of TaifaCare EMR with properly configured Stock Management Module

Module Configuration

Loading the module

The stock commodity module should be loaded normally as guided by KeHMIS instructions.

If the module is loaded and starts successfully it will appear under the modules as highlighted below

Serialization Xstream	0.2.14	luzhuangwei	Core (de)serialize API and services supported by xstream library...
Event Module	2.9.0	OpenMRS	Provides a dev friendly event notifying mechanism...
Stock Management	1.0.0-SNAPSHOT	Stock Management	Manage Stock...
Provider Management Module	2.11.0	Mark Goodrich	Allows for the creation of provider roles, as well as the management of provider/provider and provider/patient relationships...
Calculation	1.2	OpenMRS developers	Provides a framework for OpenMRS developers to author simple or complex calculations to produce a particular piece of data for a single patient or a cohort of patients...
UgandaEMR	3.3.10-SNAPSHOT	METS Program	Customizations for Uganda OpenMRS distribution...
UIT Common Module	2.12.0	OpenMRS	UIT Common Library that has common JS/CSS/HTML templates/fragments etc...

Upon successful startup, the stock management button will appear among the dashboard of the logged-in user as shown below

The screenshot shows the TaifaCare dashboard for a user logged in as 'Clinic Home'. The dashboard includes a sidebar with navigation links like Home, Service queues, Wards, Laboratory, etc. The main content area displays 'Active Visits' with a count of 14 and a table of visits. On the right, there is a 'Search for a module' bar and a grid of module buttons. The 'Manage Stocks' button is highlighted with a red box.

Which when clicked upon should display the following stock management module home page as shown below.

The screenshot shows the 'Stock Management' module home page. The page has a sidebar with navigation links like Overview, Items, Operations, etc. The main content area displays 'Expiring Stock' (10 items), 'Out of Stock' (2409 items), and 'Disposed Stock' (1 item). There are also sections for 'Inventory Alerts' (showing expiring stock for Losartan and Metronidazole tablets), 'Receiving' (No received to display), and 'Issuing' (showing dispatched stock for Mebendazole tablets).

Below is a brief description for each of the above links

Stock Items	Used for managing inventory catalogue parameters per each individual item
Stock Operations	Used for initiating, viewing or otherwise modified stock actions including receipts, requisitions, issuance, and other miscellaneous stock adjustments
User Role Scopes	Used for specifying (at module level) the stock operation actions that can be undertaken by a specific user and the scope level (e.g. store only or store/pharmacy)

Stock Sources	Used for defining commonly used external stock source/destinations to and from the facility respectively
Locations	Shortcut to access the locations module within Kenya EMR
Reports	Provision to generate, visualize and download stock related reports by a user
Settings	Shortcut to access main configuration page within Kenya EMR

Location module enhancement to support Stock Operations

The stock commodity module treats each location that will be involved in stock operations as stock holding area which are classified as follows

Classification	Remarks
Main Store	This refers to the main storage area per facility. Please note that there can only be one of such nature for smooth operations of the module
Main Pharmacy	This refers to the main pharmacy Please note that there can only be one of such nature for smooth operations of the module
Dispensary	This refers to any other dispensing area involved in dispensing drugs other than the main pharmacy

Note: At installation the module, Pharmacy locations will be appropriately tagged by default

User Role to enable access to stock management operations

The module introduces to the EMR the following roles which enable access to stock management operations.

Inventory Roles

☒ **Inventory Administrator**

☐ **Inventory Clerk**

☐ **Inventory Dispensing**

☐ **Inventory Manager**

☐ **Inventory Provider Access**

☐ **Inventory Reporting**

☐ **o3: Stock Controller/Manager**

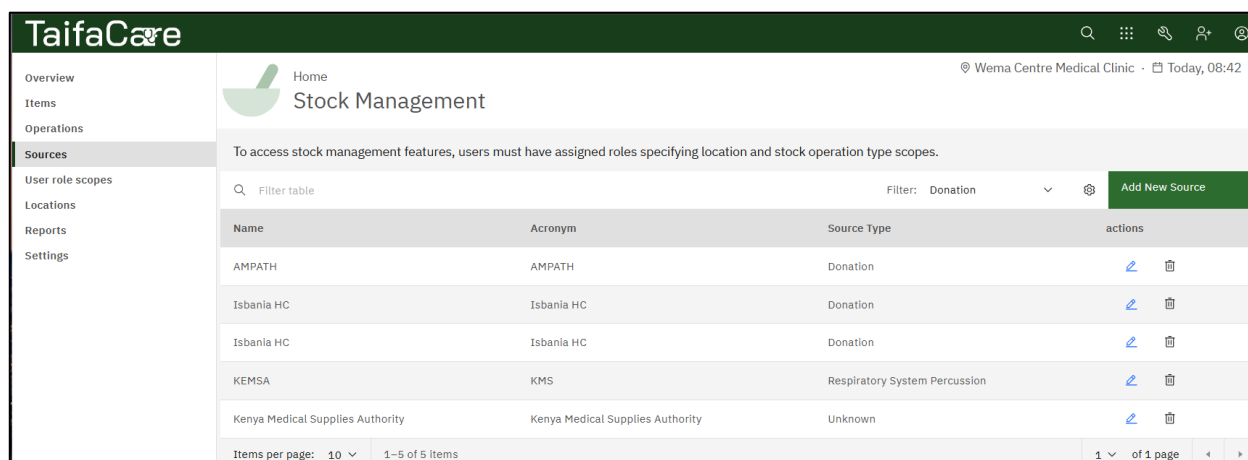

☐ **Stock Management Base Role**

Customization of commonly used external stock sources/destinations.

Stock receipt into the facility and stock transfer out of the facility operations will require the source or destination to be specified. This invariably would be time consuming if they have to be entered each time and also would not support harmonized reporting that requires

classification by type of in/out movement of stock with respect to the facility.

Therefore, the link **Stock Sources** of the main stock operation module provides for defining /Modifying such entries.

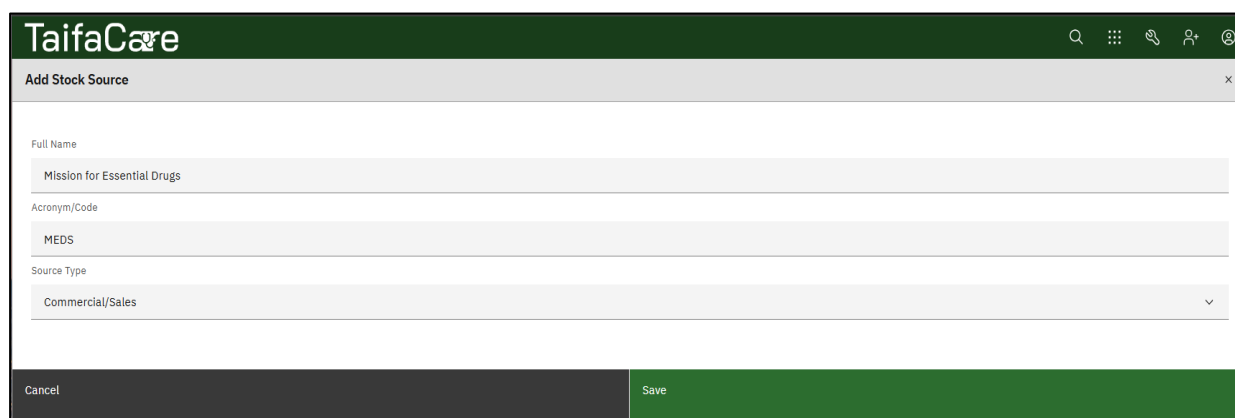

The screenshot shows the TaifaCare interface with the 'Stock Management' section active. A sidebar on the left contains navigation links: Overview, Items, Operations, Sources (selected), User role scopes, Locations, Reports, and Settings. The main content area displays a table of stock sources. Above the table, there is a filter set to 'Donation' and an 'Add New Source' button. The table has columns for Name, Acronym, Source Type, and actions (edit and delete icons). The data rows are as follows:

Name	Acronym	Source Type	actions
AMPATH	AMPATH	Donation	Edit Delete
Isbania HC	Isbania HC	Donation	Edit Delete
Isbania HC	Isbania HC	Donation	Edit Delete
KEMSA	KMS	Respiratory System Percussion	Edit Delete
Kenya Medical Supplies Authority	Kenya Medical Supplies Authority	Unknown	Edit Delete

At the bottom of the table, it shows 'Items per page: 10' and '1-5 of 5 items'. The page footer indicates '1 of 1 page'.

New entries are initiated by clicking on the **Add New** button while modification of existing ones is via clicking the *hyperlinked inked* name or the pencil icon on the left or right of each row respectively.

Either option should enable a screen in which the details of the source type can be specified as shown below.

The screenshot shows the 'Add Stock Source' form in TaifaCare. The form has the following fields:

- Full Name:** Mission for Essential Drugs
- Acronym/Code:** MEDS
- Source Type:** Commercial/Sales (dropdown menu)

At the bottom of the form, there are two buttons: 'Cancel' and 'Save'.

Mapping of Specific Stock Operations action to specific users

In addition to the EMR wide roles introduced by the module, fine grained control of the actions that can be authorized/permited for each individual user is possible through the **User Role Scope** link of the main stock commodity module.

This option shows the currently defined roles (example below) in addition to providing the **Add New** button for creation of additional user role specifications

For each user (EMR user), it's required that the appropriate role be specified (on a permanent or temporary basis) as shown below.

Also, options are provided for detailing not only the permitted stock operation actions but also the scope (stock holding area/location) in which they can be operated

The following table below summarizes each individual stock operation above

Stock Operation	Applicability	Remarks
Adjustment	All areas	<i>Used in stock quantity adjustment with the stock holding area</i>
Disposal	All areas	<i>Used in stock quantity adjustment with the stock holding area</i>
Opening Stock	All areas	<i>Used to post opening stock quantities for the respective location</i>
Receipt	MS Only	<i>Use to post stock receipt to the facility</i>
Requisition	MP and D only	<i>Use to requisition stock from main store from any other location</i>
Return	MP and D only	<i>Use to return stock to main store from any other location</i>
Stock Issue	MS Only	<i>Use to issue stock from main store to any other location</i>
Stock take	All areas	<i>Use to perform stock taking in any location</i>
Transfer out	MS Only	<i>Use to post stock moving out of the facility</i>

KEY for Applicability (in stock holding area):

MS => Main Store

MP => Main Pharmacy,

D => Dispensary

Management of Stock Commodity Catalogue

Background context

TaifaCare EMR supports definition of any new items/entities in the application using the **concept** mechanism. Furthermore, drugs are treated as concepts but also further refined through the **drug concept** approach.

The stock commodity module therefore maintains the above stated approaches and introduces a novel way of mapping the above concepts/drug concepts in such a way that their definition remains standard. The module therefore adopts existing concepts/drugs concepts and adds an extra layer on top to cater for stock commodity management parameters.

The implication is that all concepts/drugs' concepts can eventually turn into stock commodities upon being configured as such through the **Stock Items** link whose outcome is as shown in the listing below

Receiving Stock into the facility

As per MOH guideline, incoming stock receipt can be received in the **Main Store** tagged location. New entries are initiated through the **Receipt** link of the under the **Start New** link.

The data entry form for stock receipts involves the following steps

- Receipt Details:** This is used in specification of general information including receipt date, source, and responsible personnel and accompanying remarks among others as shown below.

NB: It should be noted that stock receipts can only be destined for location tagged as the **Main Store**.

TaifaCare

New: Receipt

Receipt Details

Operation Date: 11/02/2025

From: Kenya Medical Supplies Authority

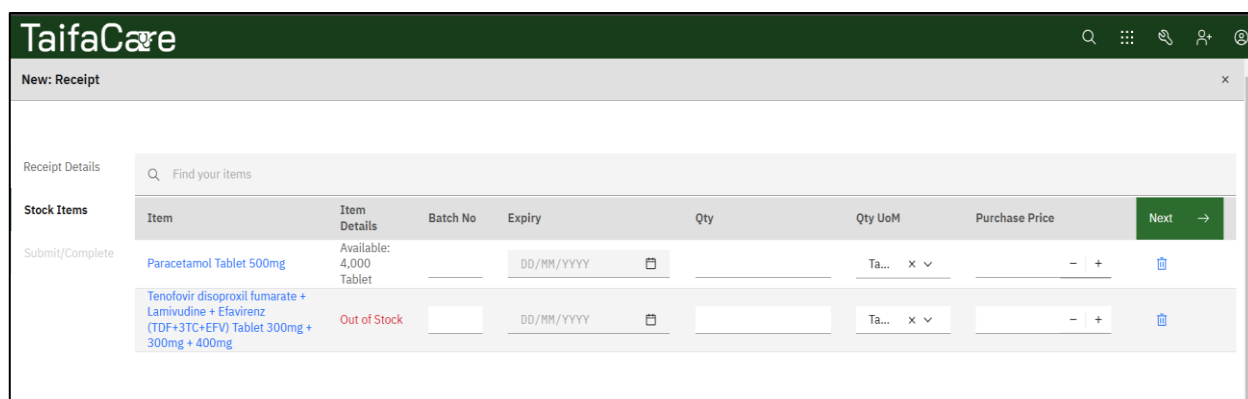

To: Main Store

Responsible Person: Shirley Lisa Turner

Remarks:

Next →

- Stock items:** Provides for entry of the individual line items pertinent to the stock items being received as shown below

TaifaCare

New: Receipt

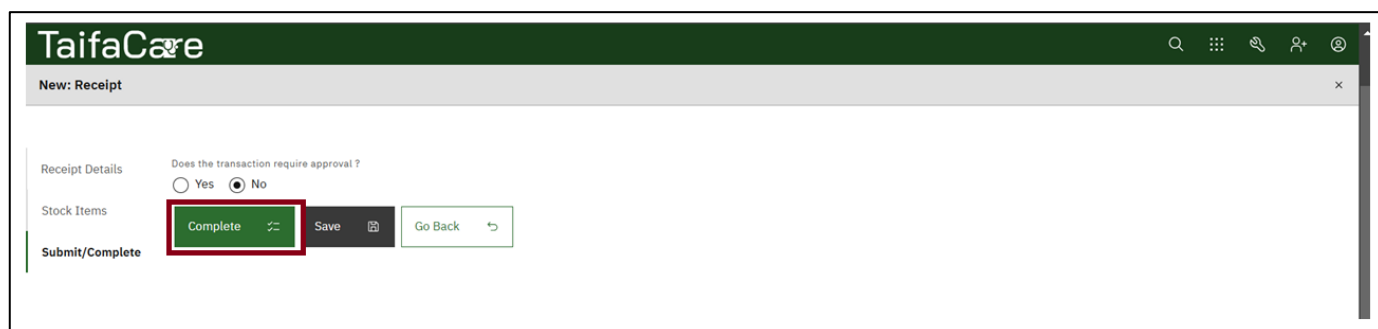

Stock Items

Item	Item Details	Batch No	Expiry	Qty	Qty UoM	Purchase Price	
Paracetamol Tablet 500mg	Available: 4,000 Tablet		DD/MM/YYYY		Ta... x v	- +	Next →
Tenofovir disoproxil fumarate + Lamivudine + Efavirenz (TDF+3TC+EFV) Tablet 300mg + 300mg + 400mg	Out of Stock		DD/MM/YYYY		Ta... x v	- +	

Notes:

- ❖ The item column is an auto complete control which shows matching entries according to user input.
- ❖ The purchase price of the line items is optional

c) Submit/Complete: Provides for indication of whether approval is required or not. In case “Yes” option is chosen, the transaction will await approval before being marked as completed. The screenshot below shows the option “No” as chosen therefore enabling completion of the entry.

Prescription and Dispensing enhancements

The stock commodity module introduced options to enable the prescriber to see a snapshot of available stock quantities per location for each selected drug as highlighted below

The screenshot shows the TaifaCare interface for a patient named Joshua Reed Collins. The left sidebar contains a navigation menu with options like Patient summary, Vitals & Anthropometrics, Medications, Care panel, Orders, Results, Visits, Allergies, Conditions, In Patient, Immunizations, Attachments, Appointments, Billing, Referrals, Relationships, Case management, SHR Portal, Clinical views, Clinical Encounter, Maternal & Child Health, Specialized Clinics, and Insurance benefits. The main area displays the patient's summary, including vital signs (BP, Heart rate, R. rate, SpO2, Temp, Weight, Height, BMI) and a list of conditions. The right sidebar shows the 'Add drug order' form, which includes fields for drug name (Paracetamol Tablet 500mg), dose, route, frequency, and patient instructions.

In addition, the dispensing window also allows the dispenser to select desired batches from which to disburse drugs to patients as highlighted in the dispensing popup window below

The screenshot shows the TaifaCare pharmacy interface. The left sidebar contains a navigation menu with options like Home, Active prescriptions, and All prescriptions. The main area displays a list of prescriptions with columns for Created, Patient name, Prescriber, and Drugs. A 'Dispense prescription' popup window is open, showing details for a prescription for Paracetamol Tablet 500mg. The popup includes fields for quantity, dose, route, frequency, and patient instructions. The 'Dispense prescription' button is highlighted in red.

Upon successful drug dispense, the Transaction tab of a particular stock item will also be automatically booked to indicate the stock movement and therefore reduce stock accordingly as shown below
